 <b>Description of the games</b>	<p>This game is very easy and will be familiar to almost all children. It is divided into few phases in each of which you as a player are helping a stray animals. First you clean it, than groom it, feed it etc. The movements are very easy and straightforward and are designed for very small children.</p> <p>Although simple this game shows students how animals should be looked after and how they should be treated. This is especially important for children in countries where violence towards animals is more or less normalised and many children are raised to be afraid of</p>

	<p>animals or even hurt them. They know there is no punishments for their deeds, but they need to be told that it is unacceptable. Instead they need to learn how to take care of their little friends</p>
 <b>Equipment Needed</b>	<p>Androids 2.3.3 or more and iOS devices</p>
 <b>Description of The Activity</b>	<p>The teachers can invite children to take their favourite toy animals (stuffed toys) from home and bring them to school. Children describe their animals (characteristics, food they eat, drink, behaviour and tell the others why they like their toys) They role play afterwards and each child takes the role of the animal (changing perspectives) and this role play works wonders with very young children as they identify with others. This helps develop empathy.</p> <p>Another activity is for teachers to show before and after pictures of stray animals and how they have transformed after being adopted. They can colour in, make animal masks and read and perform a short skit about animals.</p>
 <b>Timing</b>	<p>10 minutes</p>
